Changing the Regional Settings for EBB with Windows 7

Electronic Bluebook works only if Windows is set to use English for both "Standards and Formats" and as the input language for non-unicode input. Follow these steps to change the settings to meet this requirement.

1. Open the control panel: **Start | Control Panel** and select format.

   ![Region and Language settings](image)

   Under Format, make sure English (United States) is selected, then click Ok. Then tab to Location.

2. Under the Location tab, make sure United States is selected.
3. Under Administrative tab, select Change system locale
4. Under Change system locale, make sure English (United States) is selected.

All of these settings must be properly set in order to correctly run the EBB software.
