

Entrepreneurship Education in Universities and Colleges

Amisha Miller, Kauffman Foundation

March 2016

Universities are providing an increasing amount of entrepreneurship education

Universities are providing an increasing amount of entrepreneurship education

What's the effect?

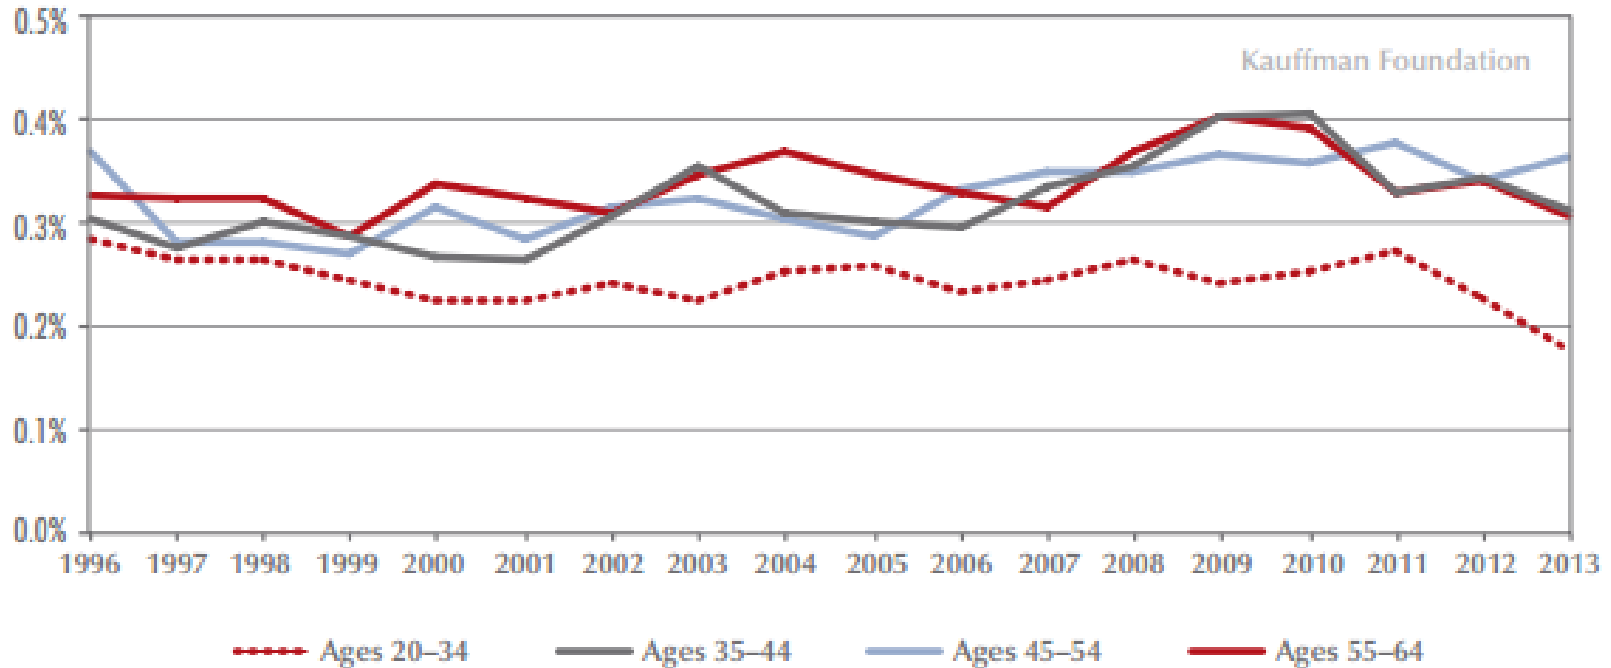

© 2013 Ewing Marion Kauffman Foundation

On a macro level, millennial entrepreneurship is declining

Rate of New Entrepreneurial Activity, by Age (1996–2013)

Higher Education programs affect short term outcomes, not long term

Academic-focused programs make an impact on skills and mindset, with mixed results for longer-term outcomes

However, we're using very shallow evidence

Few studies

- Ten program evaluations of which two were impact evaluations

Low focus on external validity

- Largely delivered on one or two campuses (6)
- Mainly delivered to undergraduate students (7)

Focus on developing economies

- The two impact evaluations were based in Tunisia and Uganda

Next steps

1

Better understanding of what exists

2

More research into program impact and context

3

Sharing across the field

How Kauffman can support this work

Build Networks

- Attract more researchers and practitioners to study programmatic questions through supporting and developing networks
- Use convening power to include other people

Improve Datasets

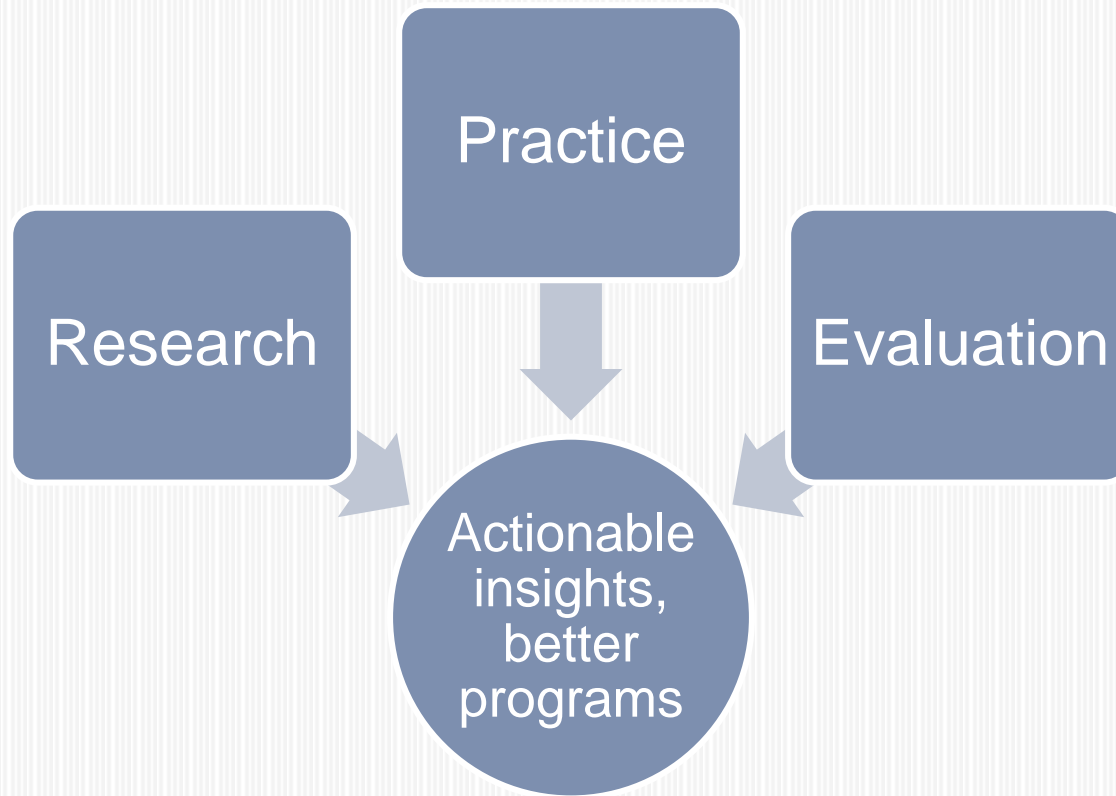

- Create benchmarking information and identify common objectives, practices or program types
- Improve the quality of student data available from programs
- Join up with other public and private data sources

Increase Quality

- Refine research questions
- Improve research methodologies
- Reach actionable insights for program managers and funders

We need to involve three main groups
